Experience overview

Motivated beginner-level Full Stack Developer with hands-on experience in building web and mobile applications using the MERN stack and Flutter. Strong foundation in frontend and backend development, authentication systems, and database-driven applications. Passionate about learning, writing clean code, and delivering user-friendly digital solutions.

Projects

Automobile POS & Workshop Management System (Easy POS)

- Built a POS and workshop management platform for automobile service centers with real-time checkout, parts-inventory tracking, mechanic service invoicing, staff attendance, and a financial analytics dashboard with Excel export.
- Designed offline-first architecture using React Context + localStorage sync, MongoDB/Mongoose relational schemas with virtual populates, and Axios interceptors for auth token handling and auto-redirects.
- Implemented JWT auth with bcrypt password hashing, RBAC middleware, and CORS/input validation to secure sensitive endpoints (financials, admin operations).
- Applied core CS concepts — MongoDB aggregation pipelines for revenue analytics, indexed queries (O(log N) lookups), fuzzy search, and pagination for large datasets.

Enterprise Cloud Restaurant OS (RestaurantOS)

- Built an enterprise SaaS restaurant platform with touch-first POS, real-time Kitchen Display System, staff attendance tracking, and an AI copilot (Ollama/OpenRouter) for inventory forecasting and menu analytics.
- Architected backend using MVC + Repository patterns; used Redux Toolkit for state management and Socket.IO for real-time order sync across cashier, kitchen, and customer views.
- Implemented JWT auth with refresh-token rotation, RBAC middleware, and NoSQL-injection-safe data validation; hardened APIs with Helmet, CORS, and rate limiting.
- Applied core CS fundamentals — queue-based order sequencing, hash-map role lookups (O(1)), and optimized pagination/search for large datasets.

Technical Skills

- **Web Development:** MongoDB, Express.js, React.js, Node.js
- **Mobile App Development:** Flutter, Dart, Dockers
- **Languages:** JavaScript, Dart, HTML, CSS, Tailwind CSS, TypeScript
- **Databases:** MongoDB
- **Other Skills:** REST APIs, Authentication & Authorization, Git/GitHub, Responsive Design, Postman

Professional Training

- **Mobile App Development (Flutter+Dart)**
Smart Start IT Institute, Khanpur (2024)
- **Web Development (MERN Stack)**
IT Center, Rahim Yar Khan (2025)

Education

Bachelor of Software Engineering (In Progress)

Institution: Khawaja Fareed University of Engineering & Information Technology (KFUEIT), Rahim Yar Khan

Intermediate (ICS)

Institution: KIPS College, Rahim Yar Khan

Matriculation (Computer Science)

Institution: Central Public School, Khanpur
